

Employee Data

You will have to generate the employee list:

Each employee has a:

- hiring date
- a part-time or full-time status
- a salary
- a work schedule
- a requested time off
- a sick day count
- an annual day count
- a health care plan
- a retirement package
- a sick day log (for when their sick days were used)
- an annual day log (for when they used their vacation time)
- a title
- a department
- a supervisor
- a set of responsibilities
- clockin times
- clockout times

Each department that you represent when solving your problem must have at least 20 employees each. Each department has at least one supervisor. You can refer to the departments file to determine what departments are appropriate to the solution you are solving. Each employee should be assigned a list of responsibilities, and all the employees of a department's responsibilities combined should be enough to fulfill the department's function at the park.
